POLLUTION, WASTE, AND RESOURCE USE COMMITMENT STATEMENT

INTRODUCTION

The manufacturing of metal and glass products is inherently resource- and energy-intensive, often generating significant waste and environmental impact. In alignment with its ethos of responsible environmental stewardship, Ajiya Berhad (“Ajiya”), together with its subsidiaries (collectively “the Group”), is committed to reducing pollution, minimising waste from manufacturing activities, and optimising the use of resources, particularly non-renewable inputs, across all operations in Malaysia.

In essence, this Commitment Statement aims to progressively embed circular economy principles throughout the Group’s business model and supply chains. Central to this approach is the adoption of the 3R Framework (Reduce, Reuse, and Recycle) as the main approach for resource management and waste minimisation.

Ultimately, through this Commitment Statement, the Group seeks to:

- Lower its overall environmental footprint;
- Improve operational efficiency and cost-effectiveness;
- Reduce exposure to environmental non-compliance risks and associated regulatory consequences; and
- Minimise potential adverse impacts on surrounding communities and ecosystems.

This Commitment Statement also complements the Group’s broader sustainability ambitions, including its intention to decarbonise operations and pursue net zero carbon emissions by 2050.

The Board of Directors (“Board”) maintains ultimate oversight on risks and opportunities associated with pollution, waste, and resource use and provides guidance to ensure the Commitment Statement aligns with the Group’s values, commitments, and long-term business objectives. The Board shall review this Commitment Statement periodically to ensure alignment with evolving regulations, industry practices, and stakeholder expectations.

SCOPE

This Statement applies to Ajiya and its subsidiaries within Malaysia, covering the Metal and Glass divisions.

It applies to all employees, including full-time, part-time, temporary, probationary, casual, contract, as well as interns. It also covers all employment levels of the Group, including the Board and Senior Management.

Where applicable, the Commitment Statement shall extend to the Group's supply chain. These shall include, but are not limited to, suppliers, business partners, vendors, contractors, consultants, associates, distributors, agents, licensees, manufacturers, sub-contractors, or any other third party that the Group has engaged in providing a product or service for Ajiya or its subsidiaries (collectively referred to as "suppliers").

COMMITMENT STATEMENT

The Group's commitment to pollution, waste, and resource use includes the following:

Waste Management

- Systematically reduce waste generation at source across all business operations;
- Maximise reuse and recycling of process residuals, including scrap metal, glass cullet, and other by-products;
- Divert production waste away from landfills through targeted recovery and recycling strategies;
- Implement waste segregation practices at relevant factories and operational sites;
- Encourage suppliers and subcontractors to adopt sustainable packaging and returnable delivery systems.

Resource Use & Circular Economy

- Reduce reliance on virgin materials through greater use of recycled metal, recycled glass cullet, and other secondary resources;
- Drive operational efficiency across the value chain and project lifecycle;
- Where feasible, adopt low-impact materials and technologies, such as energy-efficient glass, green steel, and alternatives with reduced embodied carbon; and
- Optimise material recovery rates from production processes, ensuring that scrap metal and glass cullet are channelled back into manufacturing

Pollution Prevention and Reduction

- Ensure compliance with regulatory standards for emissions, effluents, and discharges across all operations;
- Proactively reduce generation of air, noise, water, and solid waste pollutants beyond compliance thresholds; and
- Target reductions in carbon and other greenhouse gas (“GHG”) emissions, effluents, and discharges.

At the same time, the Group also aims to uphold its commitment to air quality management and water pollution prevention based on the following:

Air Quality Management

- Implement measures to minimise emissions from furnaces and production lines;
- Reduce idling of machinery and vehicles to lower GHG emissions; and
- Increase use of electricity from renewable sources, where feasible, over fossil-fuel-based energy.

Water Pollution Prevention

- Manage industrial wastewater and cooling water discharge responsibly to avoid contamination of waterways.
- Optimise water recycling and reuse in production processes to reduce freshwater withdrawal.

COMMUNICATION OF COMMITMENT STATEMENT

This Commitment Statement will be communicated to all employees across the Group and other external stakeholders which can be accessed on the Group’s corporate website to ensure transparency and accountability.
